                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 셤
                                                                       òγ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The invention relates to isolated polynucleotide (I) and polypeptide (II) sequences. (I) is useful as hybridisation probes, polymerase chair reaction (PCR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The cand gene mapping, and in recombinant production of (II). The cand for chromosome confidentifying expressed genes. (I) is useful in gene therapy techniques to restore normal activity of (II) or treat disease states involving (II). (II) is useful for generating antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as (II). (II) is useful for generating antibodies against in medical imaging of sites expressing (II). (I) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful for treating disorders involving aberrant protein expression or biological activity. The polypeptide and polynuclectide sequences have applications in clasonable for genetic disorders or other traits to assess blodiversity and to produce other types of data and products dependent on DNA and amino acid sequences. AAS64497-AAS94564 represent novel human cald aganostic coding sequences of the invention.

                                                                                                                                                                                                                                                              The present sequence encodes a human scavenger receptor, designated SRCL-P1. The SRCL-P1 polypeptide has a collectin-like structure. They are useful in clarifying the functions of macrophages and basal immunity. They are also useful in the treatment, prevention, diagnosis and investigation of diseases such as arteriosclerosis, diabetic complications, bacterial infection and restenosis following angioplasty, which are associated with accumulation of oxidized low density lipoprotein and the binding of advanced glycation end-products into cells.
                                                                                                                                                                                               New Scavenger receptor proteins SRCL-P1 with collectin-like structure, useful for treatment and diagnosis of diseases associated with oxidized

                                                                                                                                                                                                          The present sequence encodes a human scavenger receptor, designated SRCL-P1. The SRCL-P1 polypeptide has a collectin-like structure. They are useful in clarifying the functions of macrophages and basal immunity. They are also useful in the treatment, prevention, diagnosis and investigation of diseases such as arteriosclerosis, diabetic complications, bacterial infection and restenosis following angloplasty, which are associated with accumulation of oxidized low density
                                                 New Scavenger receptor proteins SRCL-P1 with collectin-like structure, useful for treatment and diagnosis of diseases associated with oxidized
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  1393 ACTACAAGGTCCACCGGCCCCAGGGGTCCAAGAGGTGACAGAGGATCCCAGGGACCCCC 1452

The invention relates to isolated polynucleotide (I) and polypeptide (II) sequences. (I) is useful as hybridisation probes, polymerase chain reaction (PCR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The cand gene mapping, and in recombinant production of (II). The polynucleotides are also used in diagnostics as expressed sequence tags and entitying expressed genes. (I) is useful in gene therapy techniques to restore normal activity of (II) or to treat disease states involving to restore normal activity of (II) or to treat disease states involving a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful in medical disorders involving aberrant protein expression or biological activity. The polypeptide and polynuclectide sequences have applications in diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other trails to assess biodiversity and to produce other types of data and products dependent on DNA and canno acid sequences. AAS64197-AAS94564 represent novel human DNA and diagnostic coding sequences of the invention.

Specification, but was obtained in electronic format directly from WIPO
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   - 4

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   of the invention. The CSR proteins are macrophage scavenger receptor proteins. The CSR proteins can be used in the treatment, gene therapy and disgnosis of diseases in which intracellular stress is important, such as arteriosclerosis, diabetic circulatory obstruction, and microbial infection. Expression of the proteins is induced in vivo in response to intracellular stress, and inhibits cell death as a result of such stress.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       This sequence encodes the human cellular stress response 3 (CSR3) protein

It currently consists of 32 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         soon as it is available and the accession number will be
